

# Project Progress Report, CS 410

Group: chadyuu

## 1 The progress made

1. Created the Q&A database by preprocessing Q&As from Stack Overflow that relate to text information system.
2. Implemented a Google Chrome extension that retrieves the three most related Q&As when browsing the content on Stack Overflow.

## 2 Remaining Tasks

1. Write documentatation.
2. Create a 5-min tutorial presentation.
  1. how to install the software
  2. instructions on how to use the software
  3. at least one example of use case so as to allow a grader to use the provided use case to test the software

## 3 Challenges/Issues being faced

1. The calculation of similarity between the current page content and each documents in the Q&A database takes much time because the number of documents is 7319. So I will try to reduce the number of Q&A documents to realize a quick response in this project.
